DELETION OF RADIATION SURVEY FOR OU 6 IHSS 143, OLD OUTFALL- JEE-0257-92

The Interagency Agreement (IAG) and the Phase I RCRA Facilities Investigation/Remedial Investigation (RFI/RI) Work Plan for Operable Unit No. 6 (OU 6) specify that a radiation survey be completed on a ten foot grid over the entire area of IHSS 143, Old Outfall. A detailed examination of the Old Outfall area by the OU 6 Project Manager revealed that the entire area had been covered with fill material and paved with asphalt.

The asphalt pavement and the underlying fill material make the detection of any radiation emanating from the buried Old Outfall highly unlikely regardless of the sensitivity of the surveying equipment. Therefore, it is proposed that the radiation survey be omitted from the Work Plan. This change will be made along with the incorporation of Technical Memorandum 1 and the responses to the Colorado Department of Health (CDH) comments.

Soil sampling of fill material and pre-fill soil obtained from borings will be analyzed for radioactive elements as specified in the IAG and the OU 6 Work Plan.

The Environmental Protection Agency (EPA) and CDH Project Managers have informally concurred with this change. EG&G Rocky Flats will rely on the Department of Energy (DOE) to transmit this change to EPA and CDH unless DOE directs EG&G differently. If you have any questions regarding this intended change, please contact P. J. Laurin of Remediation Programs at extension 5969.
